

# MAKING YOUR JD EDWARDS ERP INTELLIGENT

Dynamics of the business are constantly changing. Staff turnover is constant. The effects of inflation on product pricing are hard to control. Costs of production are becoming more difficult to control. There is a need to think about how to do business with the help of digital technology.

“**Digitalization and Technology Transforming**” are the only ways to survive in the marketplace. However, companies continue to use JDE technology that has been implemented a decade ago.

Therefore, they are not able to maximize the benefits of the JDE system and save costs or improve the way they do business. Its time to think about transforming simple JDE into “**Intelligent JDE**” in order to address Business Dynamics.

**CYRET**  
TECHNOLOGIES

**OUR CLIENTS ARE GEARING UP TO ADDRESS BUSINESS DYNAMICS WITH THE HELP OF OUR NEW METHODOLOGY FOR TRANSFORMING SIMPLE JDE INTO “INTELLIGENT JDE”.**

- Did you know that JDE Orchestrator can transfer data from any device and turn that data into actionable business processes in JDE?
- Have you moved onto EFT (i.e. NEFT and RTGS) payment or still on older bulk cheque printing?
- Are your mobile phones interacting (talking to) with JDE?
- Are you still entering the currency rates manually in JDE master?
- Are you still entering the product and supplier prices, and inventory processes (scanning process) manually into JDE?
- How is your stock taking process? Is it still manual?
- Do you still manually enter service orders?
- Do you have intelligent watchlist in JDE?
- Are you saving the cost by automating in bill matching process? (OCR to bill Match)
- Are you saving the time by using Robotic Processing Automation for Routine work?

With the new **Intelligent JDE** you can do much more. Cyret know how to make your **JDE more intelligent**. Let's Talk.
